WIRELESS SETTINGS HELP

NOTE: To ensure proper agency compliance and compatibility between similar products in your area; the operating channel must be set correctly by you.

Placement of the Router to Optimize Wireless Connectivity.

The range of your wireless connection can vary significantly based on where you install your Sky Router. For best results:

- Near the center of the area in which your PCs.
- In an elevated location such as a high shelf.
- Away from potential sources of interference, such as PCR microwaves, and cordless phones.
- Away from large metal surfaces.

If you install your Sky Router in a non-optimal location it may result in significantly reduced performance or inability to wirelessly connect to the Router.

Wireless Network

Name (SSID)

Sky has set the name of your Router to SKYXXXX. Each router has a different name. As such, there is no need to change this. When you connect other devices wirelessly to your Router this is the name you will need to select from the list of networks available in your area. If you want, you can change this to any 32 character (alphanumeric) name. Note the name is case sensitive ('A' is not the same as 'a').

Region

Sky has set the region by default to Europe.

Channel

Sky assign different channels randomly
